Abstract: ...and the like, during construction and moving. According to one embodiment, the device has a **paper backing** having a front side, back side, a connecting **end** and a finishing **end**; and a **plurality of strips** each having a first **end** and a second **end**, wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion with said first **end** **abutting** said finishing **end**. And there may be an adhesive along the connecting end that allows the device to ...

Exemplary Claim:

...N G

1. A flexible, yet sturdy device for protecting construction, said device comprising: a **paper backing** having a front side, back side, a connecting **end** and a finishing **end**; a **plurality of strips** each having a first **end** and a second **end**, wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion with said first **end** **abutting** said finishing **end**.

Non-exemplary Claims:

...12. A flexible, yet sturdy device for protecting construction, said device comprising: a **paper backing** having a front side, back side, a connecting **end** and a finishing **end**; an adhesive applied to said connecting **end**; a **plurality of strips** each having a first **end** and a second **end**, wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion with said first **end** **abutting** said finishing end and said second end of said **plurality of strips** is between one and six inches from said connecting end...

...21. A flexible, yet sturdy device for protecting construction, said device comprising: a **paper backing** having a front side, back side, a connecting **end** and a finishing **end**; an adhesive applied to said connecting **end**; a **plurality of strips** being between one foot and eight feet long, (fraction (1/16)) inch and 3 inches wide and between (fraction (1/16)) inch and 1 inch thick, each having a first **end** and a second **end**, wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion with said first **end** **abutting** said finishing **end** and said second **end** of said **plurality of strips** is between one and six inches from said connecting **end** and the width of said **paper backing** is slightly larger than the length of said **strips**.

...

...29. A flexible, yet sturdy device for protecting construction, said device comprising: a **paper backing** having a front side, back side, a first connecting **end** and second connecting **end** ; an adhesive applied to said first connecting **end** ; an adhesive applied to said second connecting **end** ; a **plurality of strips** being between one foot and eight feet long, (fraction (1/16)) inch and 3 inches wide and between (fraction (1/16)) inch and 1 inch thick, each having a first **end** and a second **end** , wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion wherein said first **end** of said **plurality of strips** is between one and six inches from said first connecting **end** and said second **end** of said **plurality of strips** is between one and six inches from said second connecting **end** and the width of said **paper backing** is larger than the length of said **strips** .

...

...device for protecting furniture, millwork, finished work, said method comprising the steps of: providing a **paper backing** wherein said **paper backing** has a front side, back side, connecting **end** and finishing **end** ; affixing a plurality of **strips** to said **paper backing** , said **plurality of strips** being parallel to each other and perpendicular to said connecting **end** and said finishing **end** and at least one inch from said connecting **end** ; and applying an adhesive material to said connecting **end** of said **paper backing** .

Abstract:

...and the like, during construction and moving. According to one

embodiment, the device has a **paper backing** having a front side, back side, a connecting end and a finishing end ; and a **plurality of strips** each having a first end and a second end , wherein said **plurality of strips** are securely affixed to said front side in a parallel fashion with said first end **abutting** said finishing end . And there may be an adhesive along the connecting end that allows the device to...

Summary of the Invention:

...the present invention, a flexible, yet sturdy device for protecting construction is disclosed comprising: a **paper backing** having a front side, back side, a connecting end and a finishing end ; a **plurality of strips** each having a first end and a second end , wherein the **plurality of strips** are securely affixed to the front side in a parallel fashion with the first end **abutting** the finishing end .

[...]

...embodiment, a flexible, yet sturdy device for protecting construction is disclosed, the device comprising: a **paper backing** having a front side, back side, a connecting end and a finishing end ; an adhesive applied to the connecting end ; a **plurality of strips** each having a first end and a second end , wherein the **plurality of strips** are securely affixed to the front side in a parallel fashion with the first end **abutting** the finishing end and the second end of the **plurality of strips** being between one and six inches from the connecting end...

...embodiment, a flexible, yet sturdy device for protecting construction is disclosed, the device comprising: a **paper backing** having a front side, back side, a connecting end and a finishing end ; an adhesive applied to said connecting end ; a **plurality of strips** being between one foot and eight feet long, between $\{\text{fraction } (1/16)\}$ inch and 1 inch thick, each having a first end and a second end and being securely affixed to the front side in a parallel fashion with the first end **abutting** the finishing end and the second end of the **plurality of strips** being between one and six inches from the connecting end and the width of the **paper backing** being slightly larger than the length of the **strips** .

[...]

...embodiment, a flexible, yet sturdy device for protecting construction is disclosed, the device comprising: a **paper backing** having a front side, back side, a first connecting end and second connecting end ; an adhesive applied to the first connecting end ; an adhesive applied to the second connecting end ; a **plurality of strips** being between one foot and eight feet long, $\{\text{fraction } (1/16)\}$ inch and 3 inches wide and between $\{\text{fraction } (1/16)\}$ inch and 1 inch thick, each having a first end and a second end , wherein the **plurality of strips** are securely affixed to the front side in a parallel fashion and wherein the first end of the **plurality of strips** is between one and six inches from the first connecting end and the second end of said **plurality of strips** is between one and six inches from the second connecting end and the width of the **paper backing** is larger than the length of the **strips** .

[...]

...protecting furniture, millwork, finished work and flooring, the method

comprising the steps of: providing a paper backing wherein said paper backing has a front side, back side, connecting end and finishing end; affixing a plurality of strips to said paper backing, said plurality of strips being parallel to each other and perpendicular to said connecting end and said finishing end and at least one inch from said connecting end; and applying an adhesive material to said connecting end of said paper backing.

[

Description of the Invention:

...anyone who wants to protect items, furniture and the like. As shown, there is a paper backing 12 having a front side 14, back side 16, a connecting end 18 and a finishing end 20; a plurality of strips 22 each having a first end 24 and a second end 26, wherein said plurality of strips are securely affixed to the front side 14 in a parallel fashion with the first end 24 abuts the finishing end 20. According to a preferred embodiment, there is an adhesive 28 applied...

...and between {fraction (1/16)} inch and 1 inch thick 70, each having a first end 72 and a second end 74, wherein the plurality of strips are securely affixed to the front side 54 in a parallel fashion and wherein the first end 72 of the plurality of strips is between one and six inches 76 from the first connecting end 56 and the second end 74 of the plurality of strips is between one and six inches from the second connecting end 58 and the width of the paper backing is larger than the length of the strips.

[...

...protecting furniture, millwork, finished work, the method comprising the steps of: step 100 providing a paper backing wherein said paper backing has a front side, back side, connecting end and finishing end; step 102 affixing a plurality of strips to said paper backing, said plurality of strips being parallel to each other and perpendicular to said connecting end and said finishing end...

...inch from said connecting end; step 103 is optional and may be evenly spacing said strips at a distance between one and four inches from another; step 104 applying an adhesive material to said connecting end of said paper backing; step 106 rolling said device so as to provide said plurality of strips upright with front side, said connecting end and said finishing end being visible; step 108 attaching adhesive strips to said back side of said paper backing.

[

Exemplary or Independent Claim(s):

1. A flexible, yet sturdy device for protecting construction, said device comprising: a paper backing having a front side, back side, a connecting end and a finishing end; a plurality of strips each having a first end and a second end, wherein said plurality of strips are securely affixed to said front side in a parallel fashion with said first end abutting said finishing end

...

- ...12. A flexible, yet sturdy device for protecting construction, said device comprising: a paper backing having a front side, back side, a connecting end and a finishing end; an adhesive applied

to said connecting end ; a plurality of strips each having a first end and a second end , wherein said plurality of strips are securely affixed to said front side in a parallel fashion with said first end abutting said finishing end and said second end of said plurality of strips is between one and six inches from said connecting end...

...21. A flexible, yet sturdy device for protecting construction, said device comprising: a paper backing having a front side, back side, a connecting end and a finishing end ; an adhesive applied to said connecting end ; a plurality of strips being between one foot and eight feet long, {fraction (1/16)} inch and 3 inches wide and between {fraction (1/16)} inch and 1 inch thick, each having a first end and a second end , wherein said plurality of strips are securely affixed to said front side in a parallel fashion with said first end abutting said finishing end and said second end of said plurality of strips is between one and six inches from said connecting end and the width of said paper backing is slightly larger than the length of said strips .

...29. A flexible, yet sturdy device for protecting construction, said device comprising: a paper backing having a front side, back side, a first connecting end and second connecting end ; an adhesive applied to said first connecting end ; an adhesive applied to said second connecting end ; a plurality of strips being between one foot and eight feet long, {fraction (1/16)} inch and 3 inches wide and between {fraction (1/16)} inch and 1 inch thick, each having a first end and a second end , wherein said plurality of strips are securely affixed to said front side in a parallel fashion wherein said first end of said plurality of strips is between one and six inches from said first connecting end and said second end of said plurality of strips is between one and six inches from said second connecting end and the width of said paper backing is larger than the length of said strips .

...device for protecting furniture, millwork, finished work, said method comprising the steps of: providing a paper backing wherein said paper backing has a front side, back side, connecting end and finishing end ; affixing a plurality of strips to said paper backing , said plurality of strips being parallel to each other and perpendicular to said connecting end and said finishing end and at least one inch from said connecting end ; and applying an adhesive material to said connecting end of said paper backing .
